Demons in the Light

Light Waste – An Overview

Billions of dollars are lost each year, mostly in first world countries, by nightly pumping light waste, trespass, and pollution into our communities. See why this must stop!

This short film is an important introduction to the "Demons in the Light" video series.

It presents an introductory overview of light and energy waste and the many serious, negative effects and costs it creates which affects almost all living things within and outside our communities.

This film is excellent for public presentations or as a personal, educational learning experience.

Refer to the web site below for additional vital information. It includes links to other videos along with a wealth of related resources for those interested in Light-Efficient Communities, their creation and promotion.
